

Certifiable ISMS for Automotive Suppliers

to meet the industry's demands for TISAX along the entire value chain.

The VDA recommends that all companies in the supply chain establish and independently certify information security based on TISAX. Depending on the field of activity, e.g., when handling prototypes, extended requirements must be met.

An ISMS helps you to keep up with the annual updates to requirements.

Our approach:

We prepare your assessment holistically.

- Information security status check
- Training of project team and coaching of safety officers
- Selection of suitable tools for your workflows
- Support with initial implementation or version updates
- Smooth establishment of the system in day-to-day work
- Internal pre-audit to prepare for assessment

Result and customer benefit:

Certifiable ISMS, adapted to your industry standard.

- Assessment of information security in your company
- Established internal security organization
- Training certificates for participating parties
- Information security risk management
- Pre-audit report and action plan (ready-for-assessment)
- Foundation for a state-of-the-art, powerful and secure IT

Our expert for all your cybersecurity needs.
